

Hydro in China will lead the increase in Asia's commercial renewable energy supply

- Exploitation of renewables depends very much on location.
- Indonesia has limited hydro resources, but significant geothermal potential.
- Biomass is used extensively in India for cooking/heating fires, while in East Asia biofuels are produced.
- China remains the biggest regional market, with a significant increase for hydro power projects expected to meet increasing demand.
- India and Indonesia will also see stronger growth, while expansion in Japan and Australia is expected to be limited.
